

About

Textile & Apparel Booklets (TABlets) aim to provide basic information in a handy and easily understandable form. NITRA compiled these TABlets by collecting information from various sources. This is an attempt by NITRA to set benchmarks in professional education for apparel industry. These TABlets have been prepared keeping in view the need for information required by shop floor personnel and students aspiring to become garment technologists. These TABlets also serve as handbooks for all those who are directly or indirectly involved in textile & apparel manufacturing and trading activities.
