

- (ii) Project title** : Development of work wear for electroplating workers
- Objectives** :
- To study and analyze the work wear clothing of workers in the plating industry and comparing it with the recommended standards to identify gaps if any.
 - To develop suitable fabric for work wear using various fibre compositions, weave structures and finishing treatments followed by analysis to understand whether the fabric is meeting the requirement as per recommended standards.
 - To design and develop work wear clothing to meet the safety and comfort requirements of the workers.
- Research Outcome** :
- Two fabric samples were found to be qualifying all the requirements of electro-plating worker's work wear amongst twenty fabric samples, identified initially.
 - Project has been completed.
